Civil Engineering Technology
Civil Engineering Physics I
203-912-DW (all sections)
Winter 2017

Teacher	Maria Dikeakos 7A.10, local 4009, mdikeakos@dawsoncollege.qc.ca Michelle Baryliuk 7A.24, local 4022, mraimbart@dawsoncollege.qc.ca						
Pre-requisites	Introduction to Applied Mathematics (201-912-DW)						
Co-requisites	None						
Ponderation	2-2-2 (2 hours of lecture, 2 hours of labs, and 2 hours of work outside class per week)						
Course objectives	<p>This course teaches the students of Civil Technology the basic principles of statics, forces and structures with an emphasis on applications. This course prepares the students for more advanced courses like structural analysis. Students are required to apply the basic laws of mechanics to a range of phenomena of importance in civil engineering, to model these phenomena and to analyze experimental data.</p> <p>Detailed information regarding the objectives and standards for the competencies related to this course and the specific performance criteria is available at https://www.dawsoncollege.qc.ca/oad/professional-development/ministerial-program-documents/.</p>						
Course competencies	<p>This course will allow the student to partially achieve the competency:</p> <p>O1XC: To analyze the structural reactions of engineering works.</p> <ol style="list-style-type: none"> 1. To examine data on the work. 2. To establish the internal stresses of the structural elements. 3. To determine the strength of structural elements. 4. To determine any deformations in structural elements. 5. To have the analysis results approved. 						
Evaluation	<p>The Institutional Student Evaluation Policy (ISEP) is designed to promote equitable and effective evaluation of student learning and is therefore a crucial policy to read and understand. The policy describes the rights and obligations of students, faculty, departments, programs, and the College administration with regard to evaluation in all your courses, including grade reviews and resolution of academic grievance. ISEP is available on the Dawson website.</p> <table style="margin-left: auto; margin-right: auto;"> <tr> <td>Quizzes and course work[†]</td><td>30%</td></tr> <tr> <td>Lab experiments</td><td>20%</td></tr> <tr> <td>Class tests</td><td>50%</td></tr> </table> <p>[†]Your teacher will provide a detailed breakdown of these components and a tentative test schedule during the first week of class.</p> <p>In order to pass the course, students must show a basic understanding of the course material at the level covered in the lectures and in the lab. This is achieved by attaining a final grade of at least 60%, calculated according to the evaluation scheme above. Note: course work not submitted by the due date may be penalized at the teacher's discretion.</p>	Quizzes and course work [†]	30%	Lab experiments	20%	Class tests	50%
Quizzes and course work [†]	30%						
Lab experiments	20%						
Class tests	50%						
Reference materials	1. Statics & Strength of Materials , 7th edition, by H.W. Morrow and R.P. Kokernak, Pearson.						
Teaching methods	The material will be presented using a mix of active learning activities, lectures, in-class problem solving, laboratory experiments and demonstrations. Laboratory periods will be used for experiments as well as class tests and lectures.						

Attendance & participation	<p>Although class attendance is not compulsory, students should make every effort to attend all classes. In the event that a class is missed, the student is responsible for all material covered or assigned during that class. Attendance during laboratory experiments and for class tests is however compulsory. In the rare event that a student for valid reason (<i>e.g.</i> due to an intensive course, illness, <i>etc.</i>) is or anticipates to be absent during a laboratory experiment or for a class test, the student must, where possible, inform the teacher and provide the necessary documents before the absence or, at the latest, on the day of their return. If the absence is excused, students will have the opportunity to complete the assessment.</p> <p>All other assessments (readings, quizzes, lab activities, <i>etc.</i>) missed due to absence are:</p> <ul style="list-style-type: none"> • assigned a grade of zero where the absence is not excused; • given zero weight in the calculation of the final grade where the absence is excused. <p>For additional information regarding attendance, students should refer to the Institutional Student Evaluation Policy (ISEP section IV-C).</p>
Literacy standards	<p>It is expected that students will be able to comprehend the course material and express themselves appropriately as a normal part of their academic performance in the course. Marks may be deducted for inadequate communication skills.</p>
Laboratory work	<p>Experimentation is an essential part of science. Students will be expected to perform experiments and report on their results. Your teacher will provide you with instructions for lab experiments and activities (there is no manual to purchase). Students must be present during the entire lab activity to receive credit.</p>
Student conduct	<p>Everyone has the right to a safe and non-violent environment. Students are obliged to conduct themselves as stated in the Student Code of Conduct and in the ISEP section on the roles and responsibilities of students (ISEP section II-D). Disruptions or excessive noise will not be tolerated. Students who do not comply with these rules will be asked to leave the class and may be referred to Student's Services for disciplinary action. Mutual respect is the key to a harmonious learning environment.</p>
Academic integrity	<p>Cheating, copying, or any other form of academic dishonesty will not be tolerated. Students should acquaint themselves with the policy of the College on plagiarism and cheating. According to ISEP, the teacher is required to report to the Sector Dean all cases of cheating and plagiarism affecting a student's grade (ISEP section V-C). The usual penalty for the first instance of cheating will be a grade of zero for the piece of work in question to all parties involved (under certain circumstances, even a first offence may be penalized by failure in the course). A second offence may result in the failure of the course. Students should note that using someone else's laboratory data without authorization from the student and the teacher is cheating.</p>
Intensive course conflicts	<p>If a student is attending an intensive course, the student must inform the teacher, within the first two weeks of class, of the specific dates of any anticipated absences.</p>
Policy on religious observance	<p>Students who intend to observe religious holidays must inform their teachers in writing as prescribed in the ISEP Policy on Religious Observance (ISEP Section IV-D), within the first two weeks of the semester. Forms for this purpose are available from your teacher. Your teacher will inform you of any modifications to planned course activities resulting from the teacher's own religious commitments.</p>

**Course
content**

The material to be covered is contained in the following chapters and sections of the text.

Weeks	Topics	Chapter & Section
1–2	Units, conversion of units, errors, math review	Ch.1: all
2–3	Resultant of concurrent forces in a plane	Ch.2: all
4–5	Equilibrium of concurrent forces in a plane	Ch.3: all
6–7	Resultant of non-concurrent forces in a plane	Ch.4: all
9–11	Equilibrium of a rigid body	Ch.5: all
12	Friction (dry and rolling)	Ch.8: 1–3 (4–8 optional)
13–14	Centre of gravity, centroids, and moments of inertia of areas	Ch.9: all
15	Internal reactions: Stress for axial loads	(Ch.10: 1–9 optional)

Labs have been designed to give you a hands-on opportunity to learn about key physical concepts. The following experiments will be performed:

1. Measurement of density and error analysis
2. Force table
3. The boom
4. Static friction

**Questions
outside class**

- All regular day program teachers will be available in their respective offices to their students during posted office hours. In the first week, your teacher will inform you of their schedule and will post it outside their office.
- Room 7A.1 is the physics study room. At scheduled times, a teacher or peer tutor will be on duty there to answer your questions. The schedule of teachers and peer tutors will be posted outside of 7A.1 in the 2nd or 3rd week of term.
