

**PHYSICS**  
**Analytical Chemistry**  
**Basic Circuits and Instrumentation**

203-925-DW (all sections)  
Fall 2019

---

<b>Teacher</b>	Basim Assaf 7A.14, local 4011, physicsone@gmail.com
<b>Pre-requisites</b>	High School Sec IV Science 558-404 or 402, or Physical Science 436 or CEGEP 982-003-50
<b>Co-requisites</b>	None
<b>Ponderation</b>	1-2-1 (1 hour of lecture, 2 hours of labs, and 1 hour of work outside class per week)

**Course objectives** This is the second physics course for students in the Analytical Chemistry program. The primary aim of the course is to acquaint students with the basic concepts of electrical measurement, DC circuits, and basic principles of electronics in order to identify electronic components and to understand schematic diagrams of equipment used in chemical analysis, as specified in the manufacturer's technical manuals.

Detailed information regarding the objectives and standards for the competencies related to this course and the specific performance criteria is available at <https://www.dawsoncollege.qc.ca/oad/professional-development/ministerial-program-documents/>.

**Course competencies** This course will allow the student to partially achieve the competency: O1DR: To understand how equipment operates.

Elements of competency:

1. To interpret the schematic for a piece of equipment.
2. To describe the operation of simple electric circuits.
3. To identify electronic components of equipment.

**Evaluation** The Institutional Student Evaluation Policy (ISEP) is designed to promote equitable and effective evaluation of student learning and is therefore a crucial policy to read and understand. The policy describes the rights and obligations of students, faculty, departments, programs, and the College administration with regard to evaluation in all your courses, including grade reviews and resolution of academic grievance. ISEP is available on the Dawson website.

Assignments	10%
Laboratory activities and projects <sup>†</sup>	30%
Class tests <sup>†</sup>	30%
Final exam	30%

<sup>†</sup>Your teacher will provide a tentative test schedule during the first week of class.

In order to pass the course, students must show a basic understanding of the course material at the level covered in the lectures and in the lab. This is achieved by attaining a final grade of at least 60%, calculated according to the evaluation scheme above. **Note: course work not submitted by the due date may be penalized at the teacher's discretion.**

**Reference materials**

1. **College Physics** by Serway, Faughn & Vuille, 8th edition, Brooks Cole.
2. **College Physics** by Urone, Thomson Publishing.
3. Additional notes supplied by instructor.

**Teaching methods** The material will be presented using a mix of active learning activities, lectures, in-class problem solving, laboratory experiments and demonstrations. Laboratory periods will be used for experiments as well as class tests and lectures.

<b>Attendance &amp; participation</b>	<p>Although class attendance is not compulsory, students should make every effort to attend all classes. In the event that a class is missed, the student is responsible for all material covered or assigned during that class. <b>Attendance during laboratory experiments and for class tests is however compulsory.</b> In the rare event that a student for valid reason (<i>e.g.</i> due to an intensive course, illness, <i>etc.</i>) is or anticipates to be absent during a laboratory experiment or for a class test, the student <b>must</b>, where possible, inform the teacher and provide the necessary documents before the absence or, at the latest, on the day of their return. If the absence is excused, students will have the opportunity to complete the assessment.</p> <p>All other assessments (readings, quizzes, lab activities, <i>etc.</i>) missed due to absence are:</p> <ul style="list-style-type: none"> <li>• assigned a grade of zero where the absence is not excused;</li> <li>• given zero weight in the calculation of the final grade where the absence is excused.</li> </ul> <p>For additional information regarding attendance, students should refer to the Institutional Student Evaluation Policy (ISEP section IV-C).</p>
<b>Literacy standards</b>	<p>It is expected that students will be able to comprehend the course material and express themselves appropriately as a normal part of their academic performance in the course. Marks may be deducted for inadequate communication skills.</p>
<b>Laboratory work</b>	<p>Experimentation is an essential part of science. Students will be expected to perform experiments and report on their results. Your teacher will provide you with instructions for lab experiments and activities (there is no manual to purchase). <b>Students must be present during the entire lab activity to receive credit.</b></p>
<b>Student conduct</b>	<p>Everyone has the right to a safe and non-violent environment. Students are obliged to conduct themselves as stated in the Student Code of Conduct and in the ISEP section on the roles and responsibilities of students (ISEP section II-D). Disruptions or excessive noise will not be tolerated. Students who do not comply with these rules will be asked to leave the class and may be referred to Student's Services for disciplinary action. <b>Mutual respect is the key to a harmonious learning environment.</b></p>
<b>Academic integrity</b>	<p>Cheating, copying, or any other form of academic dishonesty will not be tolerated. Students should acquaint themselves with the policy of the College on plagiarism and cheating. According to ISEP, the teacher is required to report to the Sector Dean all cases of cheating and plagiarism affecting a student's grade (ISEP section V-C). The usual penalty for the first instance of cheating will be a grade of zero for the piece of work in question to all parties involved (under certain circumstances, even a first offence may be penalized by failure in the course). A second offence may result in the failure of the course. Students should note that using someone else's laboratory data without authorization from the student and the teacher is cheating.</p>
<b>Intensive course conflicts</b>	<p>If a student is attending an intensive course, the student must inform the teacher, within the first two weeks of class, of the specific dates of any anticipated absences.</p>
<b>Policy on religious observance</b>	<p>Students observing religious holidays must inform their teachers, in writing, as prescribed in the ISEP Policy on Religious Observances, no later than the end of the second week of the impacted semester or term. This applies both to the semester or term, as well as to any final examination period. (ISEP Section IV-D) Please refer to the academic calendar for the exact dates. Forms for this purpose are available from your teacher. Your teacher will inform you of any modifications to planned course activities resulting from the teacher's own religious commitments.</p>

**Course  
content**

The material to be covered is contained in the following chapters and sections of the text as well as the pdf files available to the students from the instructor.

Weeks	Topics	
1-3	Work and energy, kinetic energy, potential energy, energy transfer, power	
4-7	Coulomb's law, electric field, electric potential	
7-10	Capacitance, Ohm's law, resistivity, light bulbs	
11-13	Kirchhoff's laws, series and parallel circuits, open and short circuits, power	
14-15	Magnetic force, mass spectroscopy	
Time permitting	RC circuits, inductance, solenoids, electronic component	

The lab work is an integral part of the course. Labs will be performed and will be taken from the following topics: electric field, Ohm's law, series and parallel resistors, Kirchhoffs laws, RC circuits, resistivity, identification of components and schematic diagrams. Students might also be asked to work on group projects to be completed by the end of the semester.
